

Abstract

5 The cDNA sequence encoding porcine brain
natriuretic peptide and related genes encoding canine and
human peptides with natriuretic activity are disclosed.
10 The gene is shown to make accessible the DNAs encoding
analogous natriuretic peptides in other vertebrate species.
The genes encoding these NPs can be used to effect
modifications of the sequence to produce alternate forms of
the NPs and to provide practical amounts of these proteins.
15 The NPs of the invention can also be synthesized
chemically. The invention peptides have the formula:

5 The peptides of the invention can be formulated into pharmaceutical compositions and used to treat conditions associated with high extracellular fluid levels, especially congestive heart failure.
